

Ajay M

DevOps Guy

✉ majay475@gmail.com ☎ +91 7359452076 📍 Bangalore

Summary

DevOps and Platform Engineer with 7+ years of experience building and operating scalable cloud infrastructure, Kubernetes, CI/CD pipelines, and distributed data-processing systems. Strong background in Python, AWS, containerization, observability, and automation. Experienced in designing production-grade infrastructure, distributed scraping and ingestion systems with a focus on reliability, scalability, and cost optimization.

Experience

Acid Technologies

Ahmedabad

Jul 2019 - Present

Devops Engineer

- Implemented AWS Landing Zone Accelerator (LZA) with AWS Control Tower and Microsoft Entra ID integration, enabling centralized SSO, team-based RBAC, permission sets, and secure multi-account AWS access with standardized identity and access management
- Designed and deployed a production-grade Kubernetes cluster from scratch using K3s, optimizing infrastructure costs while maintaining reliability and scalability by moving to self managed solution
- Built a reliable distributed data ingestion pipeline for a large-scale data lake, handling high-throughput ingestion, asynchronous processing, retries, and fault recovery across distributed workers
- Built CI/CD pipelines for different Node.js and Python projects along with helm chart based deployments in different K8s clusters
- Managed resource allocation for logging and monitoring tools, e.g., Fluent Bit, Grafana. As well moved applications to use OpenTelemetry

Python Bot Developer

Jul 2019 - Oct 2021

- Migrated legacy bots from Ruby to Python
- Built long-running bots to scrap different web platforms like IRC, Discord, Facebook, Weibo and dark web forums
- Worked on in-house generic captcha solving solution which can be integrated with existing selenium and playwright projects
- Designed distributed web-scraping architecture using Celery for large-scale asynchronous workloads

Internships

BotBakery

Pune

Cyber Security and Infrastructure

Jul 2018 - Jan 2019

- Migrated sites from one cloud provider to another
- Set up and managed instances on different cloud providers for clients
- Fixed malware infected php based sites and scheduled backups
- Configured monitoring and alerts for website downtime and service availability

Profiles

GitHub

[akay25](#)

Website

<https://akay25.github.io/#/>

Skills

Kubernetes

K3s, EKS, Autoscaling, Operator, KEDA, Karpenter

Cloud

AWS, EC2, S3, ECR, ECS, Spot instances, Terraform, DigitalOcean, Google Cloud

Observability

OpenObserve, Grafana, Prometheus, SigNoz, Kibana, Elasticsearch, FluentBit

Docker

Docker, containerization, Podman, multi-stage builds

CI/CD

Jenkins, ArgoCD, No touch deployment pipelines, GitHub actions, Helm/Helmfile

Python

FastAPI, Celery, Distributed Computing, Web Scraping, Django

Databases & Search

MySQL, PostgreSQL, MongoDB, Meilisearch, Redis

Rust

Tokio, Asynchronous programming, Axum, Procedural macros

Publications

Scaling scrapers to scrap 10 million items

Dec 2021

<https://blog.shivy.co.in/scraping-10->

Using websockets with Nginx Ingress

March 2021

CIVO

<https://www.civo.com/learn/using-w>

Education

Rai University

Ahmedabad • 2015 - 2019

B. Tech, Computer Science

Personal Projects

Meilisearch Sharding Adapter

Sept 2025 - Present

Built a custom meilisearch sharding adapter in Rust that distributes incoming documents across multiple Meilisearch shards, since native sharding is not available in the free-tier setup

Sentinel

Aug 2025 - Present

Built a token-efficient LLM browser agent designed to replace traditional Selenium and Playwright-based automation. It uses an agentic approach to autonomously complete browser tasks and can be deployed on the cloud

Infisical Operator

Jun 2023 - Aug 2024

Built a custom Kubernetes secret manager that synchronizes secrets from the Infisical UI directly into Kubernetes clusters

Nginx Optimization for 8k reqs/sec

Nov 2021 - Jan 2022

Optimised single instance of Nginx to handle up to 8k reqs/sec (static site) on a 2 vCPU/2GB ram instance for Wordpress based sites.

Architecture Setup

Oct 2021 - Dec 2021

Worked on robust infrastructure architecture similar to hosting service like GoDaddy, enabling the entire system to seamlessly accommodate up to 5k requests per second. This was done while maintaining a cost-effective monthly expense on AWS of less than \$200.

Built resilient scalable scrapers

Aug 2020 - Nov 2020

Effectively scraped approximately one million entities for Comet project by implementing distributed architecture along with AWS spot instances (for cost effectiveness) leveraging Celery and RabbitMQ

Python wrapper for Huawei FusionSphere

Jan 2019

A Python wrapper class to automate deployments on Huawei FusionSphere cloud computing platform.
